Scatter Plot

```
In [25]: sns.scatterplot(x="alcohol", y="total", data=data,color='red')
  plt.title("Scatterplot: Alcohol vs Total Crashes")
  plt.xlabel("Alcohol Consumption")
  plt.ylabel("Total Crashes")
```

Out[25]: Text(0, 0.5, 'Total Crashes')

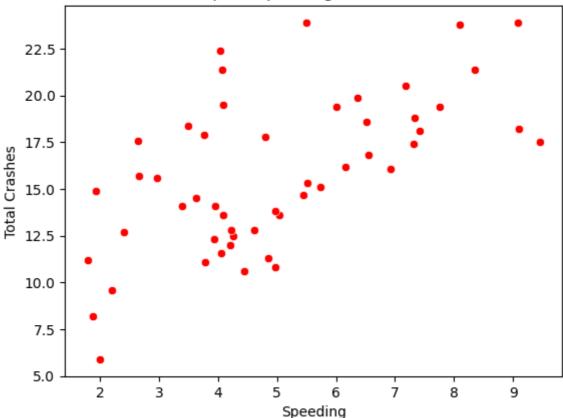

Scatterplot: Alcohol vs Total Crashes

Inference: Positive correlation between alcohol consumption and total crashes from the above plot, i.e as the alcohol consumption increases the total crashes increases.

```
In [26]: sns.scatterplot(x="speeding", y="total", data=data,color='red')
plt.title("Scatterplot: Speeding vs Total Crashes")
plt.xlabel("Speeding")
plt.ylabel("Total Crashes")
Out[26]: Text(0, 0.5, 'Total Crashes')
```

Scatterplot: Speeding vs Total Crashes

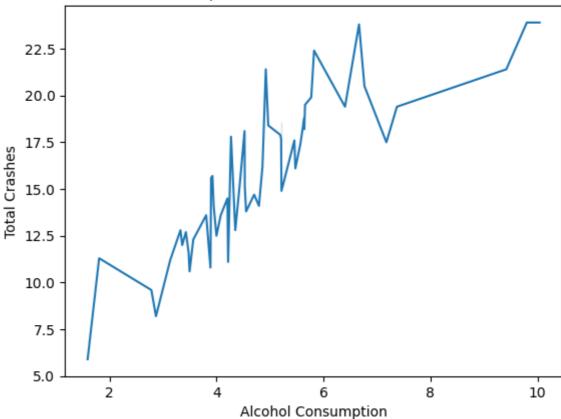

Line Plot

```
In [27]: sns.lineplot(x="alcohol", y="total", data=data)
   plt.title("Lineplot: Alcohol vs Total Crashes")
   plt.xlabel("Alcohol Consumption")
   plt.ylabel("Total Crashes")
Toyt(0, 0 5 'Total Crashes')
```

Out[27]: Text(0, 0.5, 'Total Crashes')

Lineplot: Alcohol vs Total Crashes

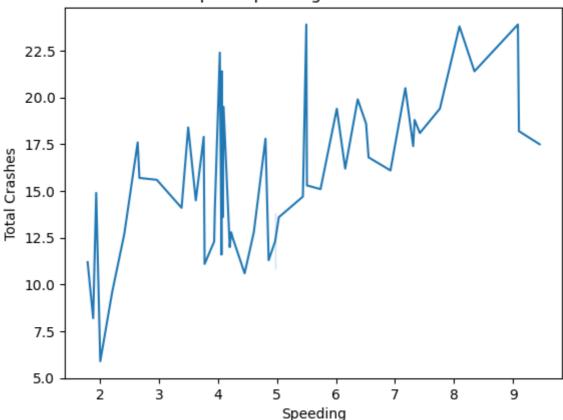

Inference: No obvious linear trend in the relationship between alcohol consumption and total crashes.

```
In [28]: sns.lineplot(x="speeding", y="total", data=data)
   plt.title("Lineplot: Speeding vs Total Crashes")
   plt.xlabel("Speeding")
   plt.ylabel("Total Crashes")
Out[28]:
```

Assignment 9/14/23, 9:46 PM

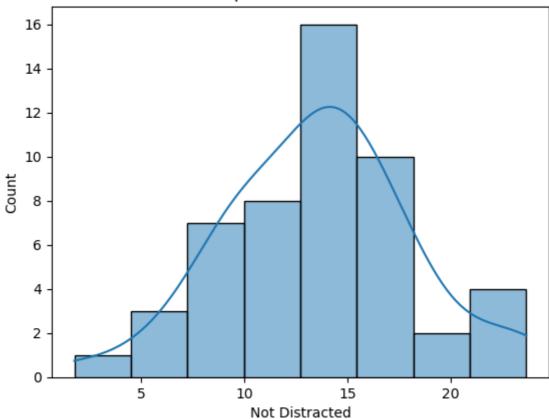

Inference: Speeding doesn't exhibit a consistent linear relationship with total crashes.

DISTRIBUTION PLOT

```
In [29]:
         sns.histplot(data["not_distracted"], kde=True)
         plt.title("Distplot: Not Distracted")
         plt.xlabel("Not Distracted")
         Text(0.5, 0, 'Not Distracted')
```

Out[29]:

Distplot: Not Distracted

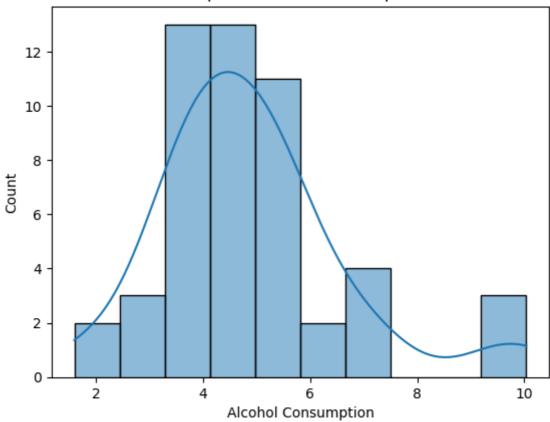

Inference: The distribution of "not_distracted" values is right-skewed

```
In [31]: sns.histplot(data["alcohol"], kde=True)
  plt.title("Distplot: Alcohol Consumption")
  plt.xlabel("Alcohol Consumption")
```

Out[31]: Text(0.5, 0, 'Alcohol Consumption')

Assignment 9/14/23, 9:46 PM

Distplot: Alcohol Consumption

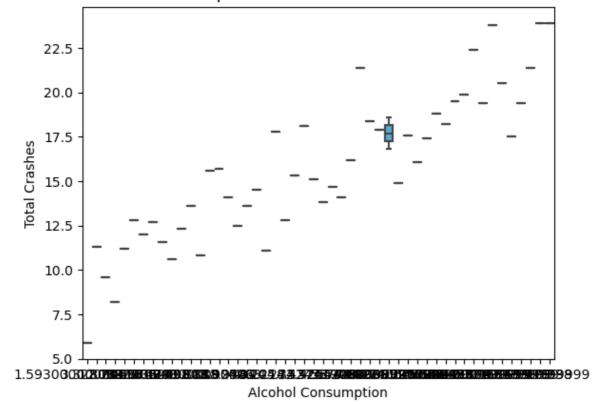

Inference: The distribution of alcohol consumption appears to be right-skewed as well

BOX PLOT

```
sns.boxplot(x="alcohol", y="total", data=data)
plt.title("Boxplot: Alcohol vs Total Crashes")
In [33]:
             plt.xlabel("Alcohol Consumption")
             plt.ylabel("Total Crashes")
            Text(0, 0.5, 'Total Crashes')
```

Out[33]:

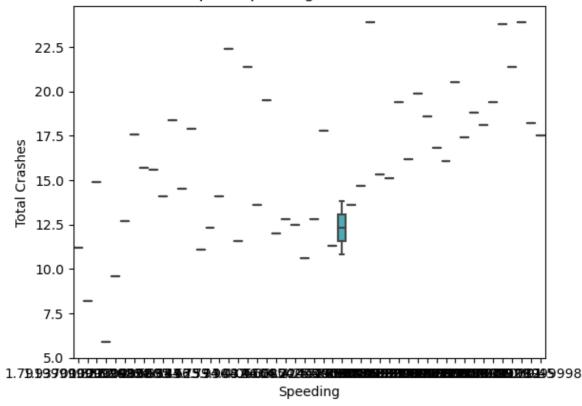

Boxplot: Alcohol vs Total Crashes

Inference: The boxplot shows the distribution of total crashes for different levels of alcohol consumption. The lines indicates the outliers

```
In [34]: sns.boxplot(x="speeding", y="total", data=data)
    plt.title("Boxplot: Speeding vs Total Crashes")
    plt.xlabel("Speeding")
    plt.ylabel("Total Crashes")
Out[34]: Text(0, 0.5, 'Total Crashes')
```

Boxplot: Speeding vs Total Crashes

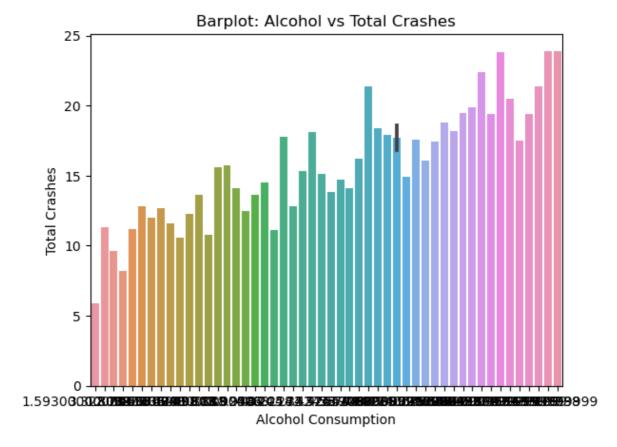

Inference: The boxplot illustrates the distribution of total crashes for different levels of speeding. The lines indicate the outliers.

BAR PLOT

```
In [35]: sns.barplot(x="alcohol", y="total", data=data)
   plt.title("Barplot: Alcohol vs Total Crashes")
   plt.xlabel("Alcohol Consumption")
   plt.ylabel("Total Crashes")

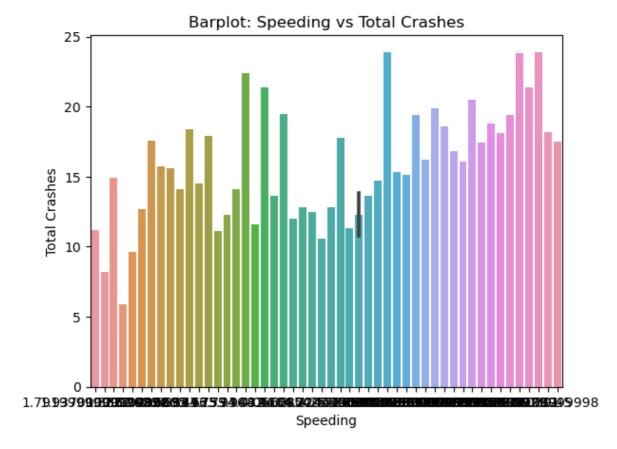

Out[35]: Text(0, 0.5, 'Total Crashes')
```

file:///C:/Users/moksh/Downloads/21BCE9167_Assignment 2.html

Inference: The barplot displays the mean total crashes for different levels of alcohol consumption. So, if the alcohol consumption is high, then total crashes are also high.

```
In [36]: sns.barplot(x="speeding", y="total", data=data)
    plt.title("Barplot: Speeding vs Total Crashes")
    plt.xlabel("Speeding")
    plt.ylabel("Total Crashes")
Out[36]: Text(0, 0.5, 'Total Crashes')
```

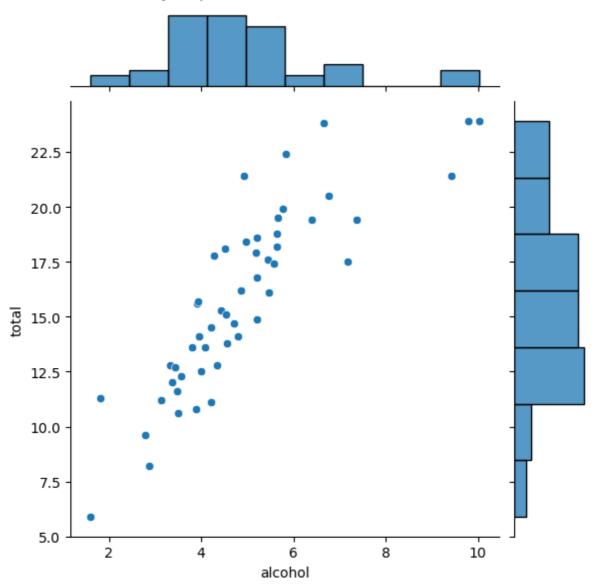

Inference: The barplot shows the mean total crashes for different levels of speeding. The crashes are high even at low speed levels also.

JOINT PLOT

```
sns.jointplot(x="alcohol", y="total", data=data, kind="scatter")
In [37]:
         plt.suptitle("Jointplot: Alcohol vs Total Crashes", y=1.02)
         Text(0.5, 1.02, 'Jointplot: Alcohol vs Total Crashes')
```

Out[37]:

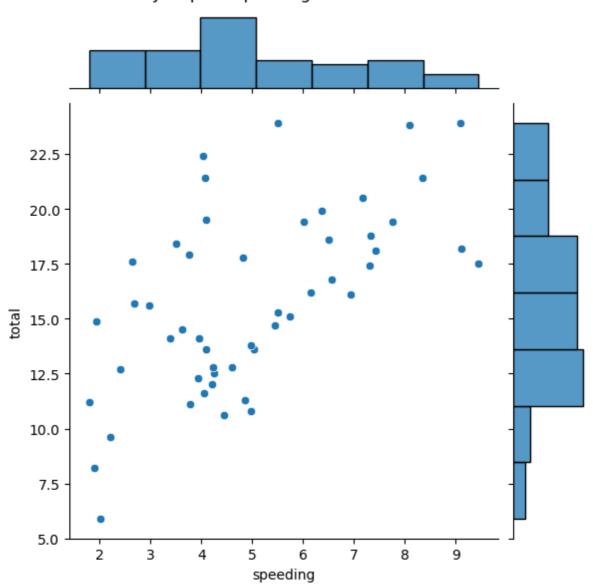

Jointplot: Alcohol vs Total Crashes

Inference: The plot in the jointplot reveals the relationship between alcohol consumption and total crashes. So, as the alcohol increases, the total crashes also increase.

```
In [39]: sns.jointplot(x="speeding", y="total", data=data, kind="scatter")
plt.suptitle("Jointplot: Speeding vs Total Crashes", y=1.02)
Out[39]: Text(0.5, 1.02, 'Jointplot: Speeding vs Total Crashes')
```

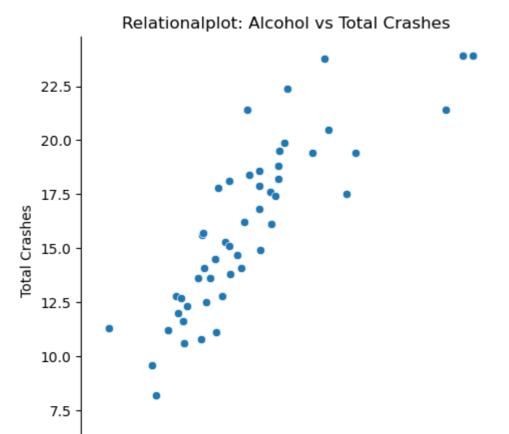

Jointplot: Speeding vs Total Crashes

Inference: The plot in the jointplot shows the relationship between speeding and total crashes. The plot is not in a specific pattern.

```
In [40]: sns.relplot(x="alcohol", y="total", data=data, kind="scatter")
  plt.title("Relationalplot: Alcohol vs Total Crashes")
  plt.xlabel("Alcohol Consumption")
  plt.ylabel("Total Crashes")
```

Out[40]: Text(0.5694444444444446, 0.5, 'Total Crashes')

Inference: The plot in the relationalplot visualizes the relationship between alcohol consumption and total crashes and it is directly proportional.

6 Alcohol Consumption

4

8

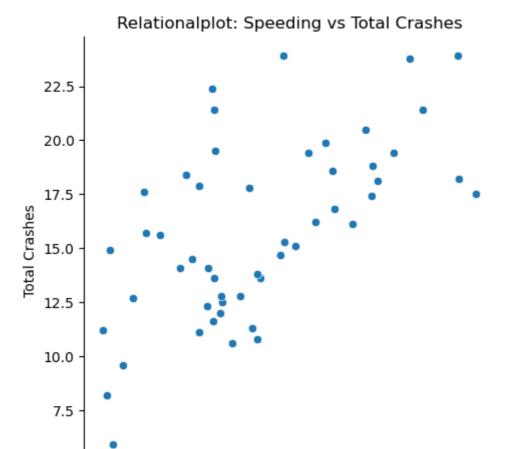

10

RELATION PLOT

2

5.0

```
In [42]: sns.relplot(x="speeding", y="total", data=data, kind="scatter")
    plt.title("Relationalplot: Speeding vs Total Crashes")
    plt.xlabel("Speeding")
    plt.ylabel("Total Crashes")
Out[42]: Text(0.56944444444444446, 0.5, 'Total Crashes')
```

Inference: The scatter plot in the relationalplot illustrates the relationship between speeding and total crashes and it is not in a specific pattern.

6

Speeding

7

8

9

```
In [43]: sns.countplot(x="alcohol", data=data)
   plt.title("Countplot: Alcohol Consumption")
   plt.xlabel("Alcohol Consumption")
Out[43]: Text(0.5, 0, 'Alcohol Consumption')
```

5

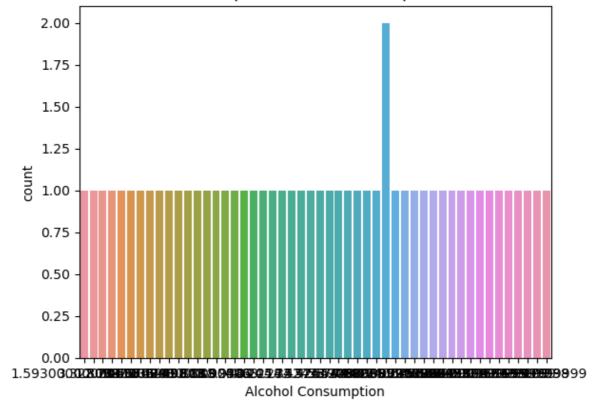

4

5.0

2

3

Countplot: Alcohol Consumption

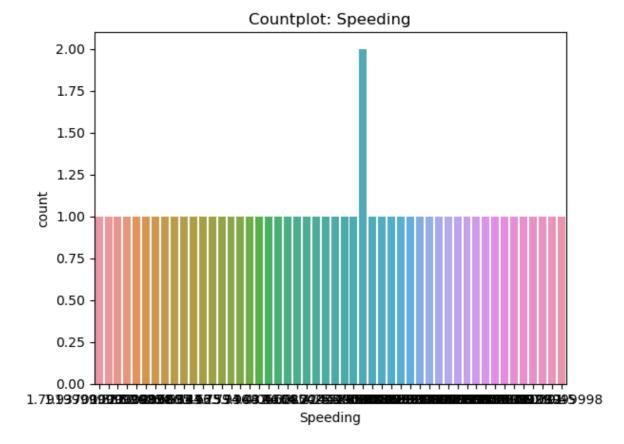

Inference: This countplot shows the frequency of different levels of alcohol consumption in the dataset and the count is maximum as 2 at a particular alcohol consumption and 1 otherwise.

COUNT PLOT

```
In [44]: sns.countplot(x="speeding", data=dat)
   plt.title("Countplot: Speeding")
   plt.xlabel("Speeding")

Out[44]: Text(0.5, 0, 'Speeding')
```

Inference: This countplot displays the frequency of speeding incidents in the dataset and the count is maximum as 2 at a particular alcohol consumption and 1 otherwise.
